

Launch and Recovery Systems

Protea designs and manufactures bespoke Launch and Recovery Systems to meet specific client requirements. Typically these are A-frame based and comprise A-frame, vehicle interface, associated winches and control system.

All Protea systems are designed for rapid mobilisation and demobilisation and to allow safe launch and recovery in a wide range of sea states to maximise the window of operations. In addition, intelligent design and careful component selection ensures a long and reliable service life.

Applications range from Trencher and Plough launch and recovery to offshore hardware deployment.
