

Well Intervention Systems

Protea manufactures a range of specialised handling equipment to support Well Intervention operations to optimise oil recovery from subsea oil wells.

Well intervention requires a vessel to remain on station for extended periods, whilst successfully deploying and attaching equipment to subsea well heads in up to 3000m of water.

Protea has a proven track record of delivering robust and reliable handling systems that allow the precise and accurate deployment of Well Intervention equipment - either on a turnkey basis or as individual system elements.

CAPABILITIES INCLUDE:

- Derricks
- Winches (Guideline, Podline, Others)
- Active Heave Compensation Systems
- Riser Handling Equipment
- Module Handling Towers
- Skidding Systems
- HPU's
- Nitrogen Generators
